SUMMARY

Senior Android Engineer with 12+ years of solid experience developing applications with **Kotlin** and **Java** and hybrid frameworks, **React Native** e **Flutter**, delivering high-impact mobile apps in E-commerce, Aviation, Fintech, and Healthcare, with apps reaching more than 100 million monthly active users. Huge experience with SuperApps like Mercado Libre. I have deep expertise in **Jetpack Compose**, **Kotlin**, **Coroutines**, **KMP**, **MVVM**, **MVP**, **KISS**, **DRY**, **Clean Architecture**, **SOLID**. Experience creating, maintaining, and integrating libraries and **Android SDKs**. Knowledge of software architecture, development best practices, testing, and performance. I'm an enthusiast and strong advocate for **TDD/BDD** and quality pipelines **CI/CD** with **Jenkins**. Experience integrating **REST APIs** with **Retrofit** and **OkHttp**. Meticulous and receptive in code review processes, balancing rigorous quality standards with openness to peer feedback. Early adopter of **AI-Assisted Development** and **AI-Agentic**, with hands-on experience in **Claude Code**, **Cursor** and **MCP**, contributing to code review automation, **spec-driven development** and automated testing skills. I also have a versatile, hands-on profile and move easily across different layers of the solution, as well as backend development with **Node.js**, **Java**, **Ktor** and **AWS Cloud**, with ownership, autonomy, and flexibility to contribute to the evolution of the platform architecture in order to generate more value for the final product. As the natural next step in my career, my goal is to establish myself as a **Staff Mobile Engineer** within the next 1 to 2 years, expanding the scope of technical leadership and architectural impact I've been building throughout my career.

EXPERIENCE

Senior Android Engineer - Mercado Libre/Mercado Pago

2024–2026

São Paulo, Brazil

- Led the development of a card and CVV data storage library for Mercado Pago's checkout, resolving a critical conversion bottleneck at the CVV entry step.
- Implemented bug fixes and new features on the Amount Screen library, responsible for **currency conversion** and exchange rate handling. Worked on adjustments to the **Server-Driven UI** layer, as well as implementing analytics trackers.
- Implemented systematic observability via **Bugsnag** across views and key classes, and used an **MCP** integration with **Bugsnag** to speed up analysis of crash clusters and navigation flows.
- Structured a more analytical bug triage process, complemented by **StrictMode**, **Android Vitals** and **Android Studio Profiler** to investigate recurring **ANRs** in the Mercado Pago app, reducing recurring crashes by 20% within two months.
- Designed, through **system design** sessions with the mobile architecture team, a new security layer for credit and debit cards using the **3DS (Three-Domain Secure)** protocol, reducing fraud across platforms that use the checkout libraries.
- Used **Feature Flags** to drive the gradual migration of legacy **UIs** to new libraries with **Jetpack Compose**.
- Raised test coverage of critical checkout libraries from **~10% para 80-90%**, reducing regressions in **CI/CD** pipelines.
- Designed and built a custom test automation framework from the ground up by integrating **Model Context Protocol (MCP)** and agent skills with **AI agents (Claude Code, Cursor)**, enabling the agents to interface directly with Robolectric and UIAutomator to autonomously generate and execute flow and integration test scenarios for payment views from specifications, eliminating a slow, error-prone manual process and driving **AI-Assisted development** adoption across the company. This project applied **spec-driven development** and **autonomous test discovery** concepts.
- Delivered features enabled by **NFC** and **Bluetooth API** in the One TAP library, used in Mercado Pago's acquiring/POS product line for the Point Mini and Point Tap devices.
- Used **BigQuery** to analyze user behavior and identify flow errors, including error screens that didn't match the actual error the user faced. After identifying and fixing several scenarios, I reduced flow errors from 300 to 5 daily occurrences, a drop of approximately 98%.

Tech Stack: Kotlin, Java, AndroidSDK, Claude Code, Cursor, MCP, BigQuery, Jetpack Compose, Bugsnag, CircleCI, Retrofit, Coroutines, Lifecycle, Hilt, Koin, Espresso, Robolectric, ViewModel, Flow, StateFlow, LiveData, Room, WorkManager, Scrum, Kanban, Server-Driven UI

Senior Android Engineer - Thoughtworks / Peloton Interactive

2023–2024

Santiago, Chile

- As **Android Engineer Leader** on the Thoughtworks consulting team at Peloton Interactive, led the migration of 80% of the app's screens from legacy XML views to **Jetpack Compose**, architecting an incremental View interoperability layer to avoid disrupting the release cadence.
- Applied **SOLID**, **DRY** and **KISS** principles to refactor legacy screens into reusable, testable **Compose** components, reducing unnecessary complexity in the new architecture.
- Integrated **Ktlint**, **MockK** and **Mockito** into the **CI/CD** pipeline in **Jenkins** to strengthen code quality standards, and contributed to the team's shared **design system**, based on **Figma**.
- Developed a system-level self-diagnostics and troubleshooting app on Peloton's custom embedded **Android OS**, running with system app privileges to consume low-level system broadcasts (**BroadcastReceivers**) reporting physical equipment connectivity state (treadmill/bike) and OS update status, broadcasts originating from the underlying hardware abstraction layer, giving me practical exposure to the framework-to-hardware boundary central to **AOSP-based** embedded systems.
- Documented the migration process in technical articles on **Confluence**, serving as a reference for the rest of the team during and after the transition.
- Delivered a more consistent and predictable **UI** for users, resulting in a **25%** reduction in customer support tickets related to **UX** confusion.

Tech Stack: Kotlin, Jetpack Compose, Ktlint, Figma, CI/CD, Jenkins, SOLID, DRY, KISS, Mockito, MockK, Hilt, Koin, Espresso, Robolectric, ViewModel, Flow, StateFlow, LiveData, Room, WorkManager, Retrofit, AOSP

Flutter Mobile Developer Sênior - Thoughtworks/ Zé Delivery - AB InBev

2024

São Paulo, Brazil

- Led the development of the beverages grid on the home screen, including the promotional grid, increasing the click-to-checkout conversion rate from 40% to 60%.
- Improved the UI of action buttons, contributing to a clearer and more direct experience in the purchase flow.
- Developed part of the grids in **Dart** following **Clean Dart** architecture.
- Improved the UI of action buttons, contributing to a clearer and more direct experience in the purchase flow.
- Implemented integration tests using **Flutter_test**, increasing the reliability of UI changes, and unit tests using **Jest**.
- Implemented analytics with the **Segment** tool, enabling better visibility into app conversion coming from social media ads.

Tech Stack: Flutter, Dart, Clean Dart, Segment, Flutter Test, Github Actions, Git, Jest, Scrum, Kanban

Developer Technology & Solutions Engineering (DTSE) - Huawei S.A.

2021–2023

Santiago, Chile

- Developed, together with Huawei's core libs team in China, the **HMS Maps** and **Petal Ads** libraries, used by approximately **500 apps** across **LATAM** in the **HMS (Huawei Mobile Services)** ecosystem.
- **Designed and independently published Coralys Fit**, a wearable app for **HarmonyOS** developed in **Java**, with over **5,000 downloads** in Chile, acting as the sole developer of the product. Implemented **BLE (Bluetooth Low Energy)** communication using the **GATT** architecture, with native **HarmonyOS** support, for data synchronization between the wearable device and the app.
- Provided technical support to the Huawei LATAM developer community, presenting integrations with **Huawei GameCenter** ecosystem libraries and facilitating HMS adoption among developers in the region.
- Led technical meetings with key partners in Chile (Movistar, Claro, Entel, Mercado Libre), as well as university sessions in Chile, Venezuela, Ecuador, Uruguay, and Peru.

Tech Stack: HarmonyOS, Java, Github, Git, BLE, GATT architecture

Senior Android Engineer - NTT DATA / Banco Itaú Unibanco

2020

São Paulo, Brazil

- Led the migration from **Java** to **Kotlin** in a modular architecture, applying idiomatic Kotlin patterns and the **DRY** principle, reducing boilerplate by ~30% and reducing redundancy across libraries.
- Organized the bank's business areas into independent, versioned libraries treated as dependencies of the core app (**Itaú PJ**).
- This modularization improved the rollback and maintenance process for the libraries, isolating failures without affecting other libs or the main app.
- Contributed to **PIX** (Brazil's instant payment system) in an app with more than **5 million** downloads.

Tech Stack: Kotlin, Java, Github, Jenkins, DRY, Maven, Modularization, Mockito, MockK, Hilt, Retrofit

Senior Android Engineer - K2 Partnering Solutions / Fleury

2018-2020

São Paulo, Brazil

- Acted as the sole Android developer and project lead for the **Campana** and **SmartCheck** apps (lab operations) at Grupo Fleury, responsible for architecture, development, and publishing on **Android**.
- Delivered the iOS side of **Campana**, an exam scheduling app built from scratch, developing **SwiftUI** screens and GraphQL integrations via **Apollo iOS** and **Swift Concurrency**, **Core Data**, **CloudKit**, while establishing UI (**XCTest**) and unit (**XCTest**) test coverage from day one to ensure release stability across booking flows.
- Developed **SmartCheck** as an **offline-first** app, with label and barcode registration directly in the app, eliminating the manual paper-based process in clinic operations.
- Selected a multi-architecture strategy adapted to each platform: **MVVM** for Android's **data-bound** flows, adopting early versions of **Jetpack Compose** and the **Android Support Library**, and **VIPER** for separation of concerns.
- Applied updated **Material Design** guidelines and accessibility principles following the **WCAG 2.1** protocol in developing the channel apps, ensuring a consistent, native, and accessible UI.
- Integrated **New Relic** in the **A+**, **Fleury** and **Fleury Lab** apps to monitor ad conversion and identify bugs, supporting the **data-driven** client's internal team data-driven decisions.

Tech Stack: Kotlin, AndroidSDK, Github, Git, Jenkins, VIPER, Material Design, DRY, New Relic, Jetpack Compose, Android Support Library, MVVM, Data-Driven, Retrofit, Coroutines

Mid Android Engineer - Banco Original

2016-2018

São Paulo, Brazil

- Worked on the **migration** of the bank's PJ (business) app, originally built in **IBM Worklight**, to a native **Android solution**, improving the product's experience and stability for users.
- With the retail app I contributed to developing onboarding screens, applying **Material Design** and implementing accessibility practices to make the experience more inclusive.
- Joined the bank's innovation team, contributing to the development of a personalized customer service app in partnership with **IBM Watson**.
- Actively participated in the feature delivery and deployment cycle, performing integration and unit tests with **Espresso**, **JUnit** and **Mockito**, as well as **Jest** for the layer still in **IBM Worklight**.
- Collaborated with the **iOS** and **UX** teams following **Scrum** methodology, contributing to more agile, aligned deliveries across platforms.

Tech Stack: IBM Worklight, Material Design, Android, Java, Swift, Jest, Mockito, JUnit, iOS, Scrum, IBM Watson

Junior Android Developer - Guiato / Bonial International Group

São Paulo, Brazil

2012-2016

- Developed geofence features impacting around 500 users daily, triggering personalized **Push Notifications** for customers who favorited stores from major Brazilian retailers. Contributed to a base of 20 fixed clients, all major Brazilian retail chains.
- Delivered UX improvements and analytics integration with **Firebase** and **New Relic** to track user behavior within the app.
- Developed a widget feature for Android, contributing to improving the app's conversion rate.
- Adjusted the **UI** of the flyer/catalog screens, improving content visualization, an improvement later adopted by Kaufda, Guiato's parent company, in subsequent app versions.
- Technically drove the migration initiative from **Java** to **Kotlin**, proposing and leading the adoption of the new language within the team.

Tech Stack: Firebase, New Relic, Android, Objective-C, Push Notifications, Android, Java, Kotlin, Scrum, Kanban

SKILLS

- **Languages:** Kotlin, Java, Swift, JavaScript, Nodejs, Flutter, Dart, React Native, Python, Objective-C
- **Android:** AndroidSDK, Lifecycle, ViewModel, Jetpack Compose, Coroutines, Flow, StateFlow, LiveData, Room, WorkManager, KMP, Material Design, Android Support Library, Android Architecture Components, RxJava
- **iOS:** SwiftUI, XCTest, Swift Concurrency, Core Data, CloudKit
- **IDE's:** Xcode, Android Studio, IntelliJ IDE, Postman, pyCharm
- **AASP:** Interface VHAL, EVS
- **AOSP:** VirtIO
- **Connectivity & Hardware:** BLE (Bluetooth Low Energy), GATT, NFC, Bluetooth API
- **Banco de dados:** SQLite, MySQL, NoSQL, MongoDB
- **Query Language Frameworks:** GraphQL
- **Dependency Injection:** Dagger, Dagger2, Hilt, Koin, Swinject
- **RESTful APIs:** Retrofit, Volley, OKHttp
- **Software Architecture:** MVVM, MVP, MVI, Clean Architecture, VIPER, SOLID, BFF, KISS e DRY
- **UI Patterns:** Server-Driven UI, Declarative UI
- **State Patterns:** Offline-first, Observer Pattern
- **Performance Patterns:** Feature Flags
- **Unit Testing:** JUnit 4, JUnit 5, Kotest, Mockito, MockK
- **Integration Testing:** Espresso, Robolectric, UIAutomator
- **Instrumented Testing:** Robolectric, UIAutomator, Espresso, Compose Testing, Hilt Testing
- **Continuous Integration/Delivery (CI/CD):** Jenkins, CircleCI, GitHub Actions, Bitrise, Jacoco
- **Code Analysis:** SonarQube, Ktlint, Detekt, Android Lint, Checkstyle
- **Cloud & Data:** AWS, Azure, Firebase, MongoDB, REST API, Serverless
- **Observability:** Bugsnag, New Relic, Segment, Google BigQuery
- **Version Control:** Git, GitHub, GitLab, Bitbucket
- **AI & Agentic:** Claude Code, Cursor, MCP (Model Context Protocol), Spec-driven development
- **Agile:** Scrum, Kanban
- **Documentation and management:** Jira, Confluence
- **Cyber Security Tools:** Proguard/Dexguard, R8 Code Obfuscation, SSL Pinning, OWASP Mobile
- **Build systems framework:** Expo

EDUCATION

MBA, Specialist in Mobile & IoT App Development
Faculdade de Informática e Administração Paulista
2018 – 2019

Bachelor's Degree in Information Systems Management
Universidade Nove de Julho
2008 – 2011

Anthropic Academy
Anthropic
2026
